

PRODUCT TRAINING COURSES

Wärtsilä Oil & Gas Systems AS is a leading supplier of gas carrier cargo handling technology, as well as manufacturer of key cargo handling equipment. Extensive experience with cargo systems for LPG, ethylene and LNG handling is the basis of supplying new solutions in an ever expanding technically driven environment.

We offer product training, both to raise the general level of understanding and to gain specific knowledge to take full advantage of the advanced features found in our systems.

TAKE FULL ADVANTAGE OF YOUR SYSTEM

The different courses can be accomplished as onshore courses utilising extensive computer simulation. Some of the courses can also be offered as onboard/on-site training. Please contact us for detailed information for each course.

To meet your specific requirements we offer both standard and tailor made training courses that teach the operation and maintenance of our products.

AVAILABLE COURSES

- Wärtsilä Hamworthy LNG Reliquefaction Systems
- Wärtsilä Hamworthy LNG Regasification Systems
- Wärtsilä Hamworthy LPG Cargo Handling Systems
- Wärtsilä Hamworthy VOC Recovery Systems

COURSE OBJECTIVES

Our courses are designed to give participants a deep understanding and detailed product knowledge within each course curriculum. Courses may include both operational and technical training and vary from basic levels to advanced training dependent on the required training level.

ENTRY QUALIFICATIONS

Our courses are not designed to teach basic skills, but to give specific instructions within each product area. We assume that participants have relevant professional experience.

INSTRUCTORS

The instructor has great influence on the success of the course. Our highly qualified instructors have experience from different systems, commissioning, service, gas trials etc, in addition to experience from teaching.

FACILITIES

We have built a training centre in our facilities in Asker, Norway equipped with simulators and other equipment ensuring quality training.

Through some of our cooperation partners we can also offer the same high quality training for some of our courses in training centres around the world.

QUALITY INSURANCE

Many of our courses are certified by DNV according to:

- DNV Standard for Certification of Learning Programmes
- Relevant training requirements of SIGTTO LNG Shipping Suggested Competence Standards

Most courses have a final test. When the participants have successfully passed the test they receive a course certificate. After each course the attendees fill out an evaluation of the course. A summary of the results and comments will be sent to the customers office together with a copy of the forms and course certificate.
